

**Health Maintenance / Preventive Care History
(New Patients Establishing Primary Care)**

PATIENT NAME	DATE OF BIRTH
--------------	---------------

Preventive care is the most important step you can take to manage your health because many of the top risk factors leading to illness and premature death are preventable.

Your provider will recommend preventive care screening tests depending on your overall health, family history, gender, and age. These screening tests will help your provider spot problems. Early detection often means a better outcome and lower health care costs.

Even if you have a chronic condition such as diabetes, high blood pressure, high cholesterol, or other medical problems, there are steps your provider can recommend that may reduce symptoms and improve your quality of life.

Please complete the chart below to the best of your ability. We will work together to get you on a schedule for preventive health that best meets your individual needs and health goals.
